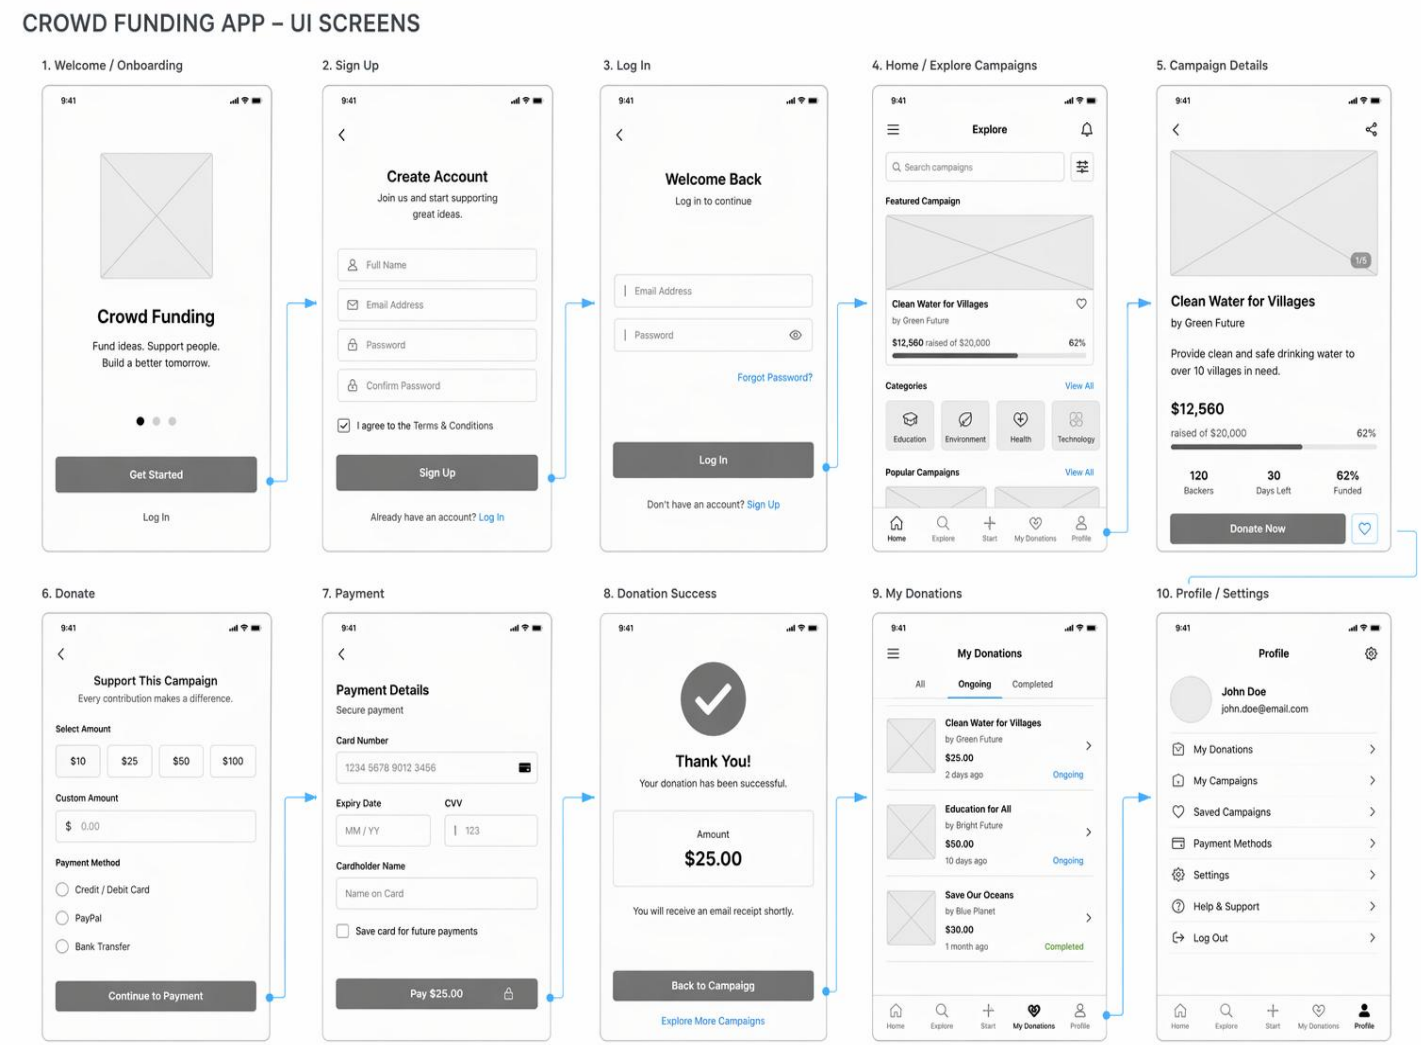
UID EXPERIMENT 4

NAME: MOHAMED Aseel S
ROLL NO: 230701316

Aim

Create a prototype with familiar and unfamiliar navigation elements for a crowd funding mobile application. Evaluate ease of use with different user groups using Proto.io.



Prototype Concept

App Name: **Crowd Funding**
Category: Mobile app for discovering campaigns, donating to causes, tracking donations, and managing crowdfunding activities.
Design Goal: Use familiar patterns such as forms, tabs, search, progress bars, and call-to-action buttons while introducing a few less familiar elements for evaluation.

Screen 1: Welcome / Onboarding

The first screen introduces the Crowd Funding app with a central illustration area, the title “Crowd Funding,” and the tagline “Fund ideas. Support people. Build a better tomorrow.” It includes a primary “Get Started” button and a secondary “Log In” option.

Familiar Elements

- Onboarding layout with a clear title, supporting tagline, and primary action button.
- Pagination dots to indicate multiple onboarding slides.
- Separate entry points for new and existing users through Get Started and Log In.

Unfamiliar Elements

- Minimal illustration without descriptive labels may leave the first impression too abstract.
- The onboarding hints rely mostly on dots instead of explanatory text.

Screen 2: Sign Up

This screen allows new users to create an account. It contains Full Name, Email Address, Password, and Confirm Password fields, a terms and conditions checkbox, and a Sign Up button. A bottom link guides existing users to Log In.

Familiar Elements

- Standard account creation fields commonly seen in mobile applications.
- Terms and Conditions checkbox before account submission.
- Back arrow and bottom alternate-action link for easy navigation.

Unfamiliar Elements

- The screen keeps all fields in one long vertical form, which may feel dense for some users.
- There is no inline password strength feedback.

Screen 3: Log In

The login page welcomes returning users with the title “Welcome Back” and a subtitle encouraging them to continue. It includes Email Address and Password fields, a Forgot Password link, and a Log In button.

Familiar Elements

- Email and password login fields with a password visibility icon.
- Forgot Password link placed near the credential area.
- Sign Up redirection link for new users.

Unfamiliar Elements

- The screen uses a large empty space above the form, which may reduce information density.
- No biometric login shortcut is provided, unlike some modern apps.

Screen 4: Home / Explore Campaigns

The Explore page is the main discovery hub. It contains a top bar with menu and notification icons, a search bar, a featured campaign card, category shortcuts such as Education, Environment, Health, and Technology, and a popular campaigns section. Bottom navigation includes Home, Explore, Start, My Donations, and Profile.

Familiar Elements

- Search bar with filter icon for finding campaigns quickly.
- Card-based campaign browsing with progress information.
- Bottom navigation bar for persistent movement between major sections.
- Category tiles that help users filter campaign types.

Unfamiliar Elements

- The “Start” item in the bottom navigation may be less obvious than a labeled Create Campaign button.
- Multiple content sections on one page can feel busy for first-time users.

Screen 5: Campaign Details

This screen presents complete campaign information for “Clean Water for Villages” by Green Future. It includes a banner image, description, amount raised, total goal, funding progress bar, backer count, days left, funding percentage, a Donate Now button, and a favorite icon.

Familiar Elements

- Detailed campaign card with title, organizer name, description, and donation button.
- Progress bar showing raised amount versus total goal.
- Back and share actions placed in the top area.

Unfamiliar Elements

- The image gallery count shown as “1/5” may not immediately signal swipeable media to all users.
- Favorite action is icon-only without text support.

Screen 6: Donate

The donation page encourages support with the message “Every contribution makes a difference.” It provides preset amount buttons such as $10, $25, $50, and $100, a custom amount field, and payment method options including Credit/Debit Card, PayPal, and Bank Transfer.

Familiar Elements

- Preset donation amounts for faster decisions.
- Custom amount option for flexible contribution.
- Radio-button payment method selection and continue button.

Unfamiliar Elements

- Users may expect impact descriptions beside each amount to understand what their donation supports.
- Bank Transfer as a direct option may be less common in fast mobile donation flows.

Screen 7: Payment Details

This screen collects secure card payment information. It includes Card Number, Expiry Date, CVV, and Cardholder Name fields, along with a checkbox to save the card for future payments. The final button shows “Pay $25.00” with a lock icon.

Familiar Elements

- Standard checkout form fields for card-based payment.
- Secure payment messaging with a lock symbol.
- Option to save card for future use.

Unfamiliar Elements

- The amount is fixed in the button label, which may confuse users if they want to edit the amount here.
- No live card type detection or validation hint is shown.

Screen 8: Donation Success

After payment, the app shows a success screen with a large checkmark, the message “Thank You!”, confirmation that the donation was successful, the donated amount, and actions to go back to campaigns or explore more campaigns.

Familiar Elements

- Confirmation state with a success icon and thank-you message.
- Receipt-related reassurance through a note about email confirmation.
- Clear post-payment actions for continuing app use.

Unfamiliar Elements

- The secondary navigation text link may be overlooked compared with the stronger primary button.
- No campaign impact summary is shown after donation.

Screen 9: My Donations

This page helps users track donation activity through tabs such as All, Ongoing, and Completed. Each donation entry includes campaign name, organizer, donated amount, time reference, and completion status.

Familiar Elements

- Tabbed layout for filtering donation records by status.

- List-based history view with campaign thumbnails and status labels. • Chevron arrows indicating that each item can open for more details.

Unfamiliar Elements

- Status colors and small text may be harder to scan for some users.
- The page title appears with a menu icon, which may feel inconsistent with other inner screens using back arrows.

Screen 10: Profile / Settings

The profile page shows user identity details along with account options such as My Donations, My Campaigns, Saved Campaigns, Payment Methods, Settings, Help & Support, and Log Out. The Profile tab in the bottom navigation is active.

Familiar Elements

- Profile header with avatar, name, and email address.
- Vertical settings list with icons and chevrons.
- Persistent bottom navigation with the current tab highlighted.

Unfamiliar Elements

- My Donations and My Campaigns appear both in the bottom navigation and settings area, which can feel repetitive.
- The hierarchy between account settings and app actions may not be fully separated.

Conclusion

The Crowd Funding prototype successfully combines familiar and unfamiliar navigation elements in a way that supports campaign discovery, donation, and account management. Familiar components such as onboarding screens, sign-up forms, campaign cards, payment forms, and profile settings made the application easy to learn. However, less familiar items such as icon-only controls, the Start tab label, and repeated navigation destinations slightly reduced clarity for some users. Based on Proto.io-style evaluation, the prototype works effectively for a broad audience when unfamiliar navigation is supported with labels, guidance, and stronger visual cues.
